The customer dialog with the bank will create stickiness and optimize returns. International fintech security standards are of course a standard given. The advanced solution can be expanded with new functionality and extensions as business life and the mobile payment industry evolve. Allow your preferred merchants to enhance their and your ROI through the promotions package and create a dynamic lifestyle and business eco-system.

USER EXPERIENCE

Full portfolio overview

Instant access from high-level account to detailed transaction information. Personal and business check, savings-, and investment accounts, full debit and credit card management, investment products, e-Wallets and virtual accounts ... all the products can be handled with an attractive User Interface at the touch of a fingertip.

Integration personal finance

Busy entrepreneurs can manage and customize both their business and personal portfolio of bank products in the same app.

Alerts & notifications

A large variety of individualized alerts via email, SMS or even in-app push notifications are possible. Get notified of transaction executions, changes in personal settings and so forth.

Approval hierarchy

Decide who can make or release transactions and so forth. The entrepreneur on the road can be confident that business hierarchy will be respected and personalized according to their needs.

Capital & trade financing

Check the balance of bank- and capital financing accounts, due dates and arrange future payments easily. Combine with online management of trade finance instruments and tax payments easily. Secure up/download of a large selection of document formats. Integrate dropforms and status inquiry.

Location services

Locate the nearest branch, ATM or even affiliated credit / debit card POS with clickable list or map. Walk there using GPS directions. Useful infos such as banking fees, interest- and FX rates, cut-off times and other information available as needed.
